

POSC – INBOUND

POSC (Process-Oriented Storage Control) in SAP EWM is used to control a warehouse process that consists of multiple activities executed in a predefined sequence.

For an inbound process, POSC can be configured to control the following flow:

Inbound Delivery → Unload → Deconsolidation → Putaway

This is particularly useful when goods arrive in mixed Handling Units (HUs) and need to be unloaded, deconsolidated, and then moved to their final storage bins.

Configuration

1. Define Process Oriented Storage Control:

Maintain storage process with external steps and process-oriented storage control

PATH: SIMG—SCM EWM—EWM—Cross process setting—Warehouse Task—Define Process Oriented storage control-

a. External Storage Process Step

External Step	Description	Int. Process Step	Direction
DL30	Deconsolidate - 3000	SPR	4 Putaway and Internal Move...
PY30	Putaway Step - 3000	PUT	4 Putaway and Internal Move...
UL30	Unload step- 3000	UNLO	Putaway

b. Storage Process – Definition

Storage Process	Description	Direction
3000 IBD1	Goods Receipt	Putaway
3000 INB		Putaway
3000 INB1	Goods Receipt	Putaway
3000 IVS1	Goods Receipt with VAS	Putaway
3000 MDCD	Merchandise Distr. Cross-Docking Putaway	Putaway

- After Creating Storage process, we need to assign External process codes to storage process. As shown below-

Sequence Number	Step	Au...	Prod/H...	Duration	Unit
1	UL30	✓	✓		
2	DL30	✓	✓		
3	PY30
